

2 Where and When Did the Events of the Old Testament Take Place?

Outline

- **Where Did the Events of the Old Testament Take Place?**

- Three Regions of the Ancient Near East
- Four Subregions of Israel
- Highways of the Ancient Near East

- **What Events Does the Old Testament Describe?**

- Israel's Ancestry: The Patriarchs
- Israel's Beginnings: Moses and Joshua
- Israel's Statehood:
 - David and His Dynasty
- Israel's Exile and Restoration:
 - Ezra and Nehemiah

Objectives

After reading this chapter, you should be able to

- Identify on a map the three geographical regions of the ancient Near East
- Compare the development of the cultures of Mesopotamia, Egypt, and Syria–Palestine
- Discuss the key geographic features of the four subregions of Israel
- Trace the highlights of the history of Israel and the ancient Near East during the New Stone Age, Copper–Stone Age, Early Bronze Age, Middle Bronze Age, Late Bronze Age, Iron Age I, and Iron Age II
- List the different peoples who significantly influenced the history of Israel

incarnation

Fertile Crescent

We read in the New Testament that God revealed himself to humanity through the **incarnation**; that is, God took on human form in Jesus of Nazareth. This means God's revelation occurred in a specific time and place. Therefore, in order for us to understand the message of the New Testament, we must study the events of the life of Christ and the early church. The history and geography of the first-century world of Palestine provide an important background for Christians reading the New Testament.

God's revealed truth in the Old Testament is also incarnational. He revealed himself in specific times and places to a specific group of people, the Israelites. Therefore, it is important for Christians to understand the time in which ancient Israel existed. This chapter discusses the land in which God's revelation occurred and the major events of Old Testament history.

Where Did the Events of the Old Testament Take Place?

Ancient Israel was one small part of a larger area known as the ancient Near East. This term refers basically to what is known today as the Middle East. It stretches from the ZAGROS MOUNTAINS in the east to the Mediterranean Sea on the west. The northern boundaries of the ancient Near East reach to the CASPIAN and BLACK SEAS, with the CAUCASUS MOUNTAINS between them. In the south, the ancient Near East is bounded by the ARABIAN DESERT and two large bodies of water (the PERSIAN GULF and the RED SEA).

Though Israel was geographically smaller than many of its neighbors in the ancient Near East, its location was strategically important throughout ancient history. This small piece of land forms a bridge connecting three continents—Asia, Africa, and Europe.¹ Israel's crossroads location had two important consequences. First, many nations and empires throughout history desired to control, or at least have access to, Israel for purposes of trade

and transportation to other parts of the ancient world. Second, many foreign cultural influences poured into ancient Israel. Thus, Israel was exposed to great cultural interchange and commerce throughout its history.

Three Regions of the Ancient Near East

The ancient Near East contains three geographical subregions joined by an arch of rich soil known as the "**Fertile Crescent**" (notice the shaded area on the map below is shaped like a crescent). Most of the terrain of the ancient world was rugged and inhospitable to human life. The

fertile lands are bordered by nearly impassable mountain ranges to the north and vast deserts to the south. But within the crescent, flat lands and an abundance of water made this location the birthplace of human civilization.

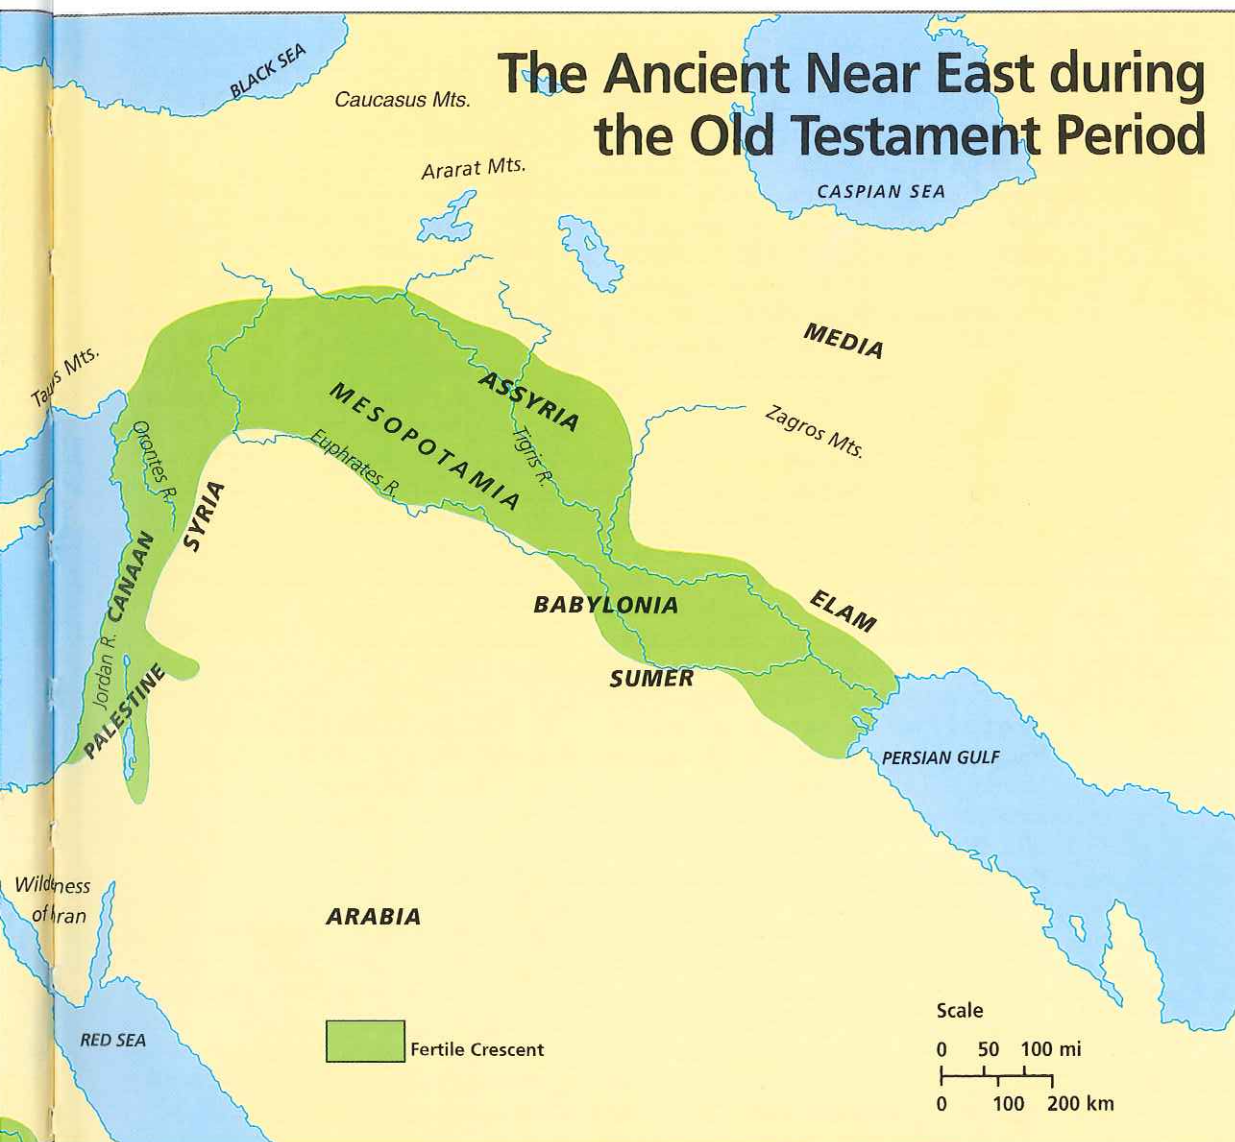

The three geographical subregions of the ancient Near East were MESOPOTAMIA, Syria–Palestine, and Egypt. These three regions were all marked in early antiquity by important river cultures.

Mesopotamia

The Greek term “Mesopotamia” (“between the rivers”) refers to that great stretch of land between the EUPHRATES

and TIGRIS RIVERS.² This region extends from the mouth of the Persian Gulf northward along the bend in the Euphrates and reaches eastward to the Tigris at the foot of the Zagros Mountains. All of modern Iraq and parts of IRAN, SYRIA, and LEBANON make up the area known as Mesopotamia.

Mesopotamia’s terrain is greatly varied—from the mountainous northern regions to the desert sands of the southwest. The weather is unpredictable and the waters of the twin rivers are capricious. Flooding posed an ever-present threat for the ancient Mesopotamians, but so did drought. Consequently, the

Neolithic Age

cuneiform

hieroglyphs

pharaoh

region, especially in the south, hovered constantly between desert and swamp. Nor were there any natural defenses to ward off enemy invaders.

In spite of all the dangers, Mesopotamia was capable of providing the good life for those fortunate enough to live there. This was especially true in southern Mesopotamia, where the river water could be channeled to provide irrigation for crops or navigated for purposes of trade. Scholars of earliest human history believe civilization began in the foothills north of the Tigris River, when ancient Mesopotamians of the **Neolithic Age** (around 7000 B.C.) first cultivated plants, domesticated animals, and began farming. Sometime around 3100 B.C., the Sumerians invented writing in southern Mesopotamia when they discovered they could use wedge-like shapes on various materials to represent words. The wedge-shaped writing (known as **cuneiform**, from Latin *cuneus* ["wedge"] and *forma* ["form"]) was most easily incised into wet clay, a substance readily accessible in southern Mesopotamia. Often the scribe would bake the clay tablets in the sun or in an oven, producing extremely durable cuneiform tablets, thousands of which have been discovered by modern archaeologists. Cuneiform could also be inscribed on metal or stone.

The potential good life in Mesopotamia was no secret to others living in the ancient Near East. With no natural defenses, those enjoying life in Mesopotamia had to keep an eye on external threats. Throughout ancient history, Mesopotamia saw the influx of many different people groups and changes of power. The Sumerians were followed by a long succession of Semites of various nationalities. During the last quarter of the third millennium B.C., the first group of Semites, the Akkadians, rose to power and occupied southern Mesopotamia together with the Sumerians. But by the turn of the millennium, another Semitic group known as Amorites began to arrive in enormous numbers; they dominated the next thousand years of history in Mesopotamia. The Amorites eventually established major foci of power in the south at BABYLON on the Euphrates, and in the north at ASSUR and NINEVEH along the Tigris. The Babylonians in the south and the Assyrians in

the north were two of the most important groups in Mesopotamia and played a significant role in Old Testament history.

Egypt

The same geographical features that made early human civilization possible in Mesopotamia were also present on the northeastern coast of Africa along the Nile River.³ While Mesopotamia showed a slow and gradual development from the Stone Age to the beginnings of human history, Egypt appears to have suddenly jumped overnight from the Neolithic Age into urban culture. The relative suddenness of the birth of civilization in Egypt is probably attributable to Mesopotamian influences on the Nile Valley. The development of Egyptian **hieroglyphs** (Latin *hieroglyphicus*, sacred carving) may have been influenced by Mesopotamian cuneiform, though this is far from certain.⁴

One ancient historian fittingly described Egypt as the gift of the Nile River.⁵ Without question, the Nile is the dominant geographic feature of Egypt and played a major role in Egypt's history and cultural outlook on life. This great river stretches more than six hundred miles through the northeastern deserts of Africa to the Mediterranean Sea. The Nile thus created a sharp contrast between the riverside meadow and the desert on either side. The black, fertile soil of the river valley abounded with life and vitality, while the lifeless red desert sands reminded the ancient Egyptians of their mortality. The Egyptians called the rich soil of the Nile Valley "the black land" and the encroaching desert sands beyond "the red land."⁶ They clearly treasured the great muddy river that brought life-giving water and soil.

Ninety percent of the ancient population lived in the fertile river valley, which was seldom more than ten miles wide. The Nile has no tributaries and the country has no rainfall except for coastal showers along the shores of the Mediterranean Sea. The Egyptians understood how dependent they were on the river to maintain life in their "black land." They gave credit to their god-king, the **pharaoh**, for the Nile's annual flood. From a source far south of Egypt, beyond their

Without question, the Nile is the dominant geographic feature of Egypt and played a major role in Egypt's history. This great river created a sharp contrast between the riverside meadow and the desert on either side.

understanding, the river rose predictably every June, peaking in September and returning to its normal level by November. This annual inundation was vitally important to continued prosperity in Egypt because its waters brought rich layers of silt and rejuvenated the soil, making Egypt's "black land" one of the richest lands in the world.⁷

But the long and narrow river valley also tended to create a severe contrast between north and south in ancient Egypt. The south included, and was distinguished by, the length of the Nile and was called Upper Egypt (since the southern region is upstream). Lower Egypt consisted of the delta created where the Nile spreads out and empties into the Mediterranean Sea. This contrast resulted in marked differences in language dialects and cultural outlooks on life. The geographically isolated Upper Egypt depended on cattle-herding and was provincial and conservative. Lower Egypt was interested in commercial trade because of its access to European and Asian sea ports. It had an international and cosmopolitan flavor.⁸ Political unification was the first task of the pharaoh, and the strategic central location of Memphis was obviously important.

Unlike Mesopotamia, Egypt enjoyed relative seclusion from the outside world. The great desert borders and the Mediterranean Sea to the north provided natural

geographical boundaries and meant Egypt had fewer incidents of foreign aggression in its history. There were occasional threats from LIBYA to the west or invasions by sea. But the normal concern for Egyptian security was Asian invaders from across the body of water we now call the SUEZ CANAL. With a few exceptions, however, the Egyptians were able to contain these threats with mere police actions. Compared to Mesopotamia, Egypt was relatively free from invasion. As a result, Egypt did not encounter the large number of ethnic and cultural infiltrations dotting Mesopotamian history.

Egyptian history is, therefore, not one of constant power changes and new people groups, but rather the rise and fall of mostly native Egyptian dynasties. Some of these dynasties saw Egypt develop large empires with international significance in ancient Near Eastern history. These periods of imperial strength fall naturally into the Old Kingdom (dynasties 3–6, 2700–2200 B.C.), the Middle Kingdom (dynasties 11–13, 2000–1700 B.C.) and the New Kingdom (dynasties 18–20, 1550–1100 B.C.). Thus, the Egypt of the patriarchs was probably Middle Kingdom Egypt; that of Moses and the exodus, New Kingdom Egypt. By the time of Israel's united monarchy, Egypt had lost its position as an international superpower, though it continued to wield significant cultural influence.

Levant

rift

Syria–Palestine

Syria–Palestine is the area from the northern bend of the Euphrates along the Mediterranean coast, southward to the Sinai desert. Israel was the southernmost section of Syria–Palestine.

The great river cultures of Mesopotamia and Egypt were made possible by geographical features leading to the organization and unification of the regions. The rivers were large enough to provide accessible trade, making economic growth possible. The geographical features of Mesopotamia and Egypt made national unification possible.

By contrast, Syria–Palestine is characterized by segmentation. Smaller rivers (the Jordan and the Orontes, see map, p. 37) and vast differences of topography divided the region into subdivisions and smaller territories. Syria–Palestine was not the site of advanced civilization and national empires early in history. Instead, its primary geopolitical importance was in its role as a land bridge along the Fertile Crescent. Throughout ancient history, the empires of the great river cultures, Egypt and Mesopotamia, sought to control access to Syria–Palestine for both economic and military/political reasons.

In addition to forming a land bridge among three continents, the area is marked by two other topographical features. First, the eastern coast of the Mediterranean Sea forms the western boundary of this area. The coast (known as the “**Levant**”) extends for four hundred miles, and became the crossroads for all trade and travel in the ancient world. The second important feature in Syria–Palestine’s topography is known as the “**rift.**” The **JORDAN RIFT** is a great fissure in the surface of the earth extending from north of the Sea of Galilee through the Jordan Valley and the Dead Sea to the shores of the Red Sea. To the north, this cleavage is framed by the Lebanon and Anti-Lebanon mountain ranges (see map, p. 41). The altitude descends steadily as one moves south to the Dead Sea, the surface of which is 1,275 feet below sea level, the lowest point on earth.⁹

Four Subregions of Israel

The prominent topographical feature of all of Syria–Palestine, the Jordan Rift, also

plays a role in Israel’s longitudinal orientation. The country is divided north-to-south into four zones: the coastal zone, the central mountain range, the Jordan Rift, and the **TRANSJORDANIAN HIGHLANDS**.¹⁰

The coastal plains

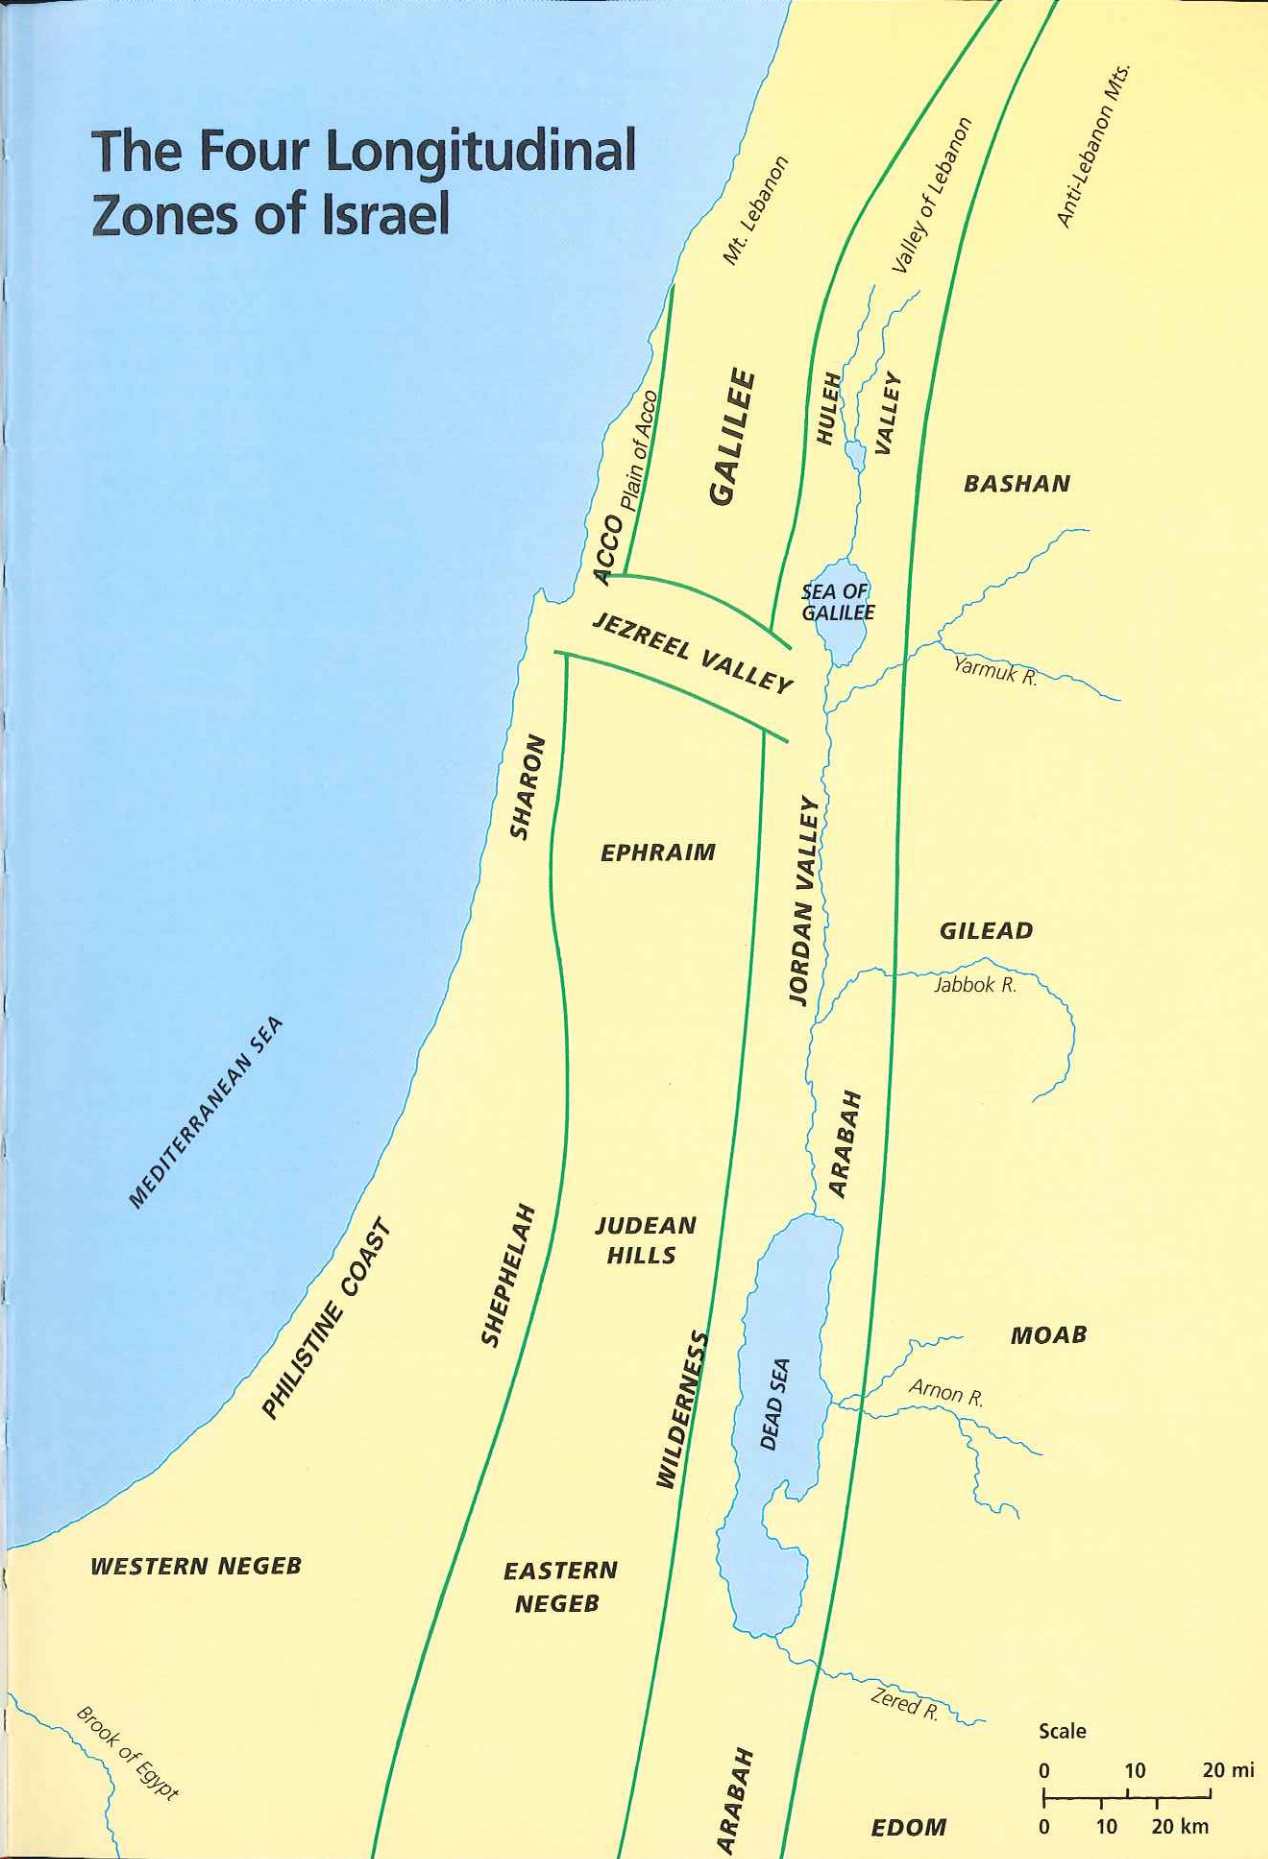

The coastal plains are narrow in the north but gradually become broader in the south as the coastline slants westward, as the map on p. 41 illustrates. This region was one of the richest in ancient Israel because of its fertile soil and the accessibility of water (numerous springs and high groundwater level).

The striking characteristic of Israel’s coastline compared to the rest of the Levant in the north is the lack of natural harbors. The city of **ACCO**, in the **BAY OF HAIFA**, was the only important harbor in Israel in Old Testament times (see map, p. 41). By contrast, the coastal strip between the Mediterranean Sea and the Lebanon Mountains north of Israel had many natural harbors because of the jagged terrain rising out of the sea. The Phoenicians, who occupied this strip during most of the Old Testament period, used these harbors to good advantage, becoming expert sailors and sea-merchants. The Israelites never quite learned to trust the sea, however, and regularly had to hire Phoenician expertise whenever it was necessary to put to sea (1 Kgs 9:26–27).

This coastal zone has six subregions from north to south: the Plain of Acco, the **JEZREEL VALLEY**, the **SHARON PLAIN**, the **PHILISTINE COAST**, the **SHEPHELAH** (or “low-hills”), and the western **NEGEB** or southern desert (see map, p. 41). The Jezreel Valley is the only exception to Israel’s longitudinal orientation, since it interrupts the central highlands and connects the coastal plains in the west with the Jordan Rift to the east. This valley’s rich soil and its location as an intersection for the region’s great highways (see map, pp. 44–45) meant the major military powers of the biblical period passed through it and often attempted to control it.

The southern coastal plain was home to Israel’s most bitter enemies, the Philistines, throughout most of the Old Testament period. The greatest concentration of Philistines and their five major cities occupied this plain. From the period of the

The Four Longitudinal Zones of Israel

judges to David's rise to the throne, the Philistines fought intermittently with the Israelites of the central highlands.

The ridge, or central mountain range
A ridge of hills rises sharply between the coastal plains and the Jordan Rift. These highlands may be subdivided into four main regions: GALILEE, EPHRAIM, JUDEAN HILL country, and the eastern Negeb (see map, p. 41).

The highest point along the Levant coast is the towering Mount Hermon, with an altitude of over 9,200 feet.¹¹ Just south of Mount Hermon, Upper Galilee reaches elevations of over three thousand feet. A steep slope separates Upper Galilee from Lower Galilee to the south, with altitudes just below two thousand feet.

The central hills of Ephraim and the Judean hill country are quite similar. This range of mountains is protected on both slopes by deep stream beds, making east-west passage difficult. A north-south road along the eastern slope connects the hills of Ephraim with the Judean hill country. Many major cities lay along this road: MIZPAH, SHECHEM, SHILOH, and BETHEL in Ephraim, and JERUSALEM, BETHLEHEM, and HEBRON in Judah. The eastern part of the desert south of Judah (the "Negeb") has a continuation of the hills of the central mountain range.

The Jordan Rift

This main topographical feature of Syria-Palestine plays a prominent role in the shape of Israel's landscape. The deep depression in the earth's surface has an average width of 10 miles, and descends from an altitude of about 300 feet in the north to 1,275 feet below the Mediterranean at the shore of the Dead Sea.¹² In the center of the rift, the Jordan River flows down from the foot of Mount Hermon to the Dead Sea.

The Jordan Rift may be subdivided north to south into five regions: the HULEH VALLEY, CHINNERETH (that is, the Sea of Galilee), the JORDAN VALLEY, the DEAD SEA, and the ARABAH (see map, p. 41).

The Transjordanian highlands

East of the Jordan Rift, the land rises sharply into a plateau, which gradually gives way to the Arabian desert. This steep plateau reaches greater altitudes

than much of the central highlands, then drops precipitously down to the Jordan Valley. The Transjordanian highlands reach heights up to 5,700 feet in the south, such as in the mountains of Edom.

This mountain tableland is divided by four river canyons: YARMUK, JABBOK, ARNON, and ZERED (see map, p. 41). These rivers flow through deep gorges in the plateau into the Jordan River or the Dead Sea. Frequently in biblical history these rivers formed natural boundaries for national or political entities. The Yarmuk forms the southern border for BASHAN. The area from the Yarmuk to the Jabbok we may conveniently refer to as GILEAD. The territory between the Jabbok and the Arnon was Moabite land during much of the Old Testament period. South of the Zered was Edomite country. So the Transjordanian highlands may be subdivided into four areas from north to south: Bashan, Gilead, MOAB, and EDMOM. Most of the borders were fluid, changing frequently in biblical times.

The eastern extremes of the Transjordanian highlands enjoy no natural border with the Arabian desert. The fate of this mountain plateau in biblical times was often tied to its relationship with the desert. Scorching winds and migratory desert nomads often made it difficult to maintain agriculture and a settled life. But the high ridges bordering on the Jordan Rift caught the last benefits of the Mediterranean storms and created enough rainfall to support sheep-herding and crops of wheat.

Highways of the Ancient Near East

Of the many important highways and communication routes of the ancient world, two international roadways require mention here.¹³ Their precise courses did not vary greatly in biblical times because the broken topography of Syria-Palestine made it difficult to create new routes.

The way of the sea (*Via Maris*)

The title "way of the sea" comes from Isaiah 9:1 and refers to an international road running along the Levant coast (see map, pp. 44-45). This highway was used throughout the biblical period and some

Part of the western Negeb or southern desert.

Vulgate

of the most important cities of antiquity were located near it. The **Vulgate** rendered Isaiah's phrase as *Via Maris*, which was used in later times to designate the whole network of roadways from Egypt through Syria–Palestine into Mesopotamia.

On the southern coastal plain, the *Via Maris* moves northward and splits into two branches, the western continuing along the coast and the eastern passing through the Jezreel Valley to Megiddo, and from there to Hazor and Damascus and on into Mesopotamia. The various

branches of this great international highway converge at Megiddo, at the entrance to the Jezreel Valley. The valley, and especially the city of Megiddo, were strategic locations for all commerce and travel in the ancient world.

The king's highway

The second important international route is the "king's highway" (taken from Nm 20:17; 21:22). This roadway extends from the GULF OF AQABAH at ELATH through the Transjordanian highlands to Damascus

Paleolithic Age

Mesolithic Age

Chalcolithic Age

Bronze Age

Iron Age

Early Bronze Age

(see map on pp. 44–45). Because of the four deep river beds in the Transjordanian plateau, the highway follows a path twenty-five to thirty miles east of the Arabah on the very edge of the desert.

This was a secondary route from Damascus to Egypt, often competing with the *Via Maris*. It was most popular for nomadic caravans transporting commercial goods and for the trade of agricultural products. During the Israelite monarchy, the king's highway attained a special significance because of increased trade with Arabia.

and around 1200 B.C., people discovered the greater benefits of the use of iron.

The period from about 3300 to 2000 B.C. is known as the **Early Bronze Age**. This period witnessed the invention of writing and the beginnings of human history. In Mesopotamia, the Sumerians first used cuneiform extensively for writing; in Egypt, the use of hieroglyphics during the Old Kingdom Period is well attested. In Mesopotamia and Syria–Palestine, city-states first began to grow, and with them the need for communication, travel, and trade. In Mesopotamia, a series of strong city-states gained dominance during the Sumerian Early Dynastic Periods. Toward

What Events Does the Old Testament Describe?

The details of New Testament history cover only about a century. By contrast, the history of Old Testament Israel spans nearly two millennia. Over this length of time, Israelites came in contact with many different peoples and nations. The Old Testament makes frequent reference to Assyrians, Babylonians, Egyptians, Arameans, and many other important peoples. This section traces the broad outline of Israel's history, also introducing the most important people groups.¹⁴

Israel's Ancestry: The Patriarchs

Historians do not have enough evidence to give precise dates for many of the events we discuss in this survey text. In fact, since absolute chronology is impossible, archaeologists divide the millennia before the Christian era into periods according to the technology available at the time. So after the various stone ages (**Paleolithic**, **Mesolithic**, Neolithic, and **Chalcolithic**), we can refer in the broadest of terms to the **Bronze Age** and the **Iron Age**. These terms do not mean to imply that the switches from stone to bronze to iron were sudden, or that only bronze was used for tools and other utensils during the Bronze Age while only iron was used during the Iron Age. But in general, around 3300 B.C., bronze technology spread throughout the ancient Near East,

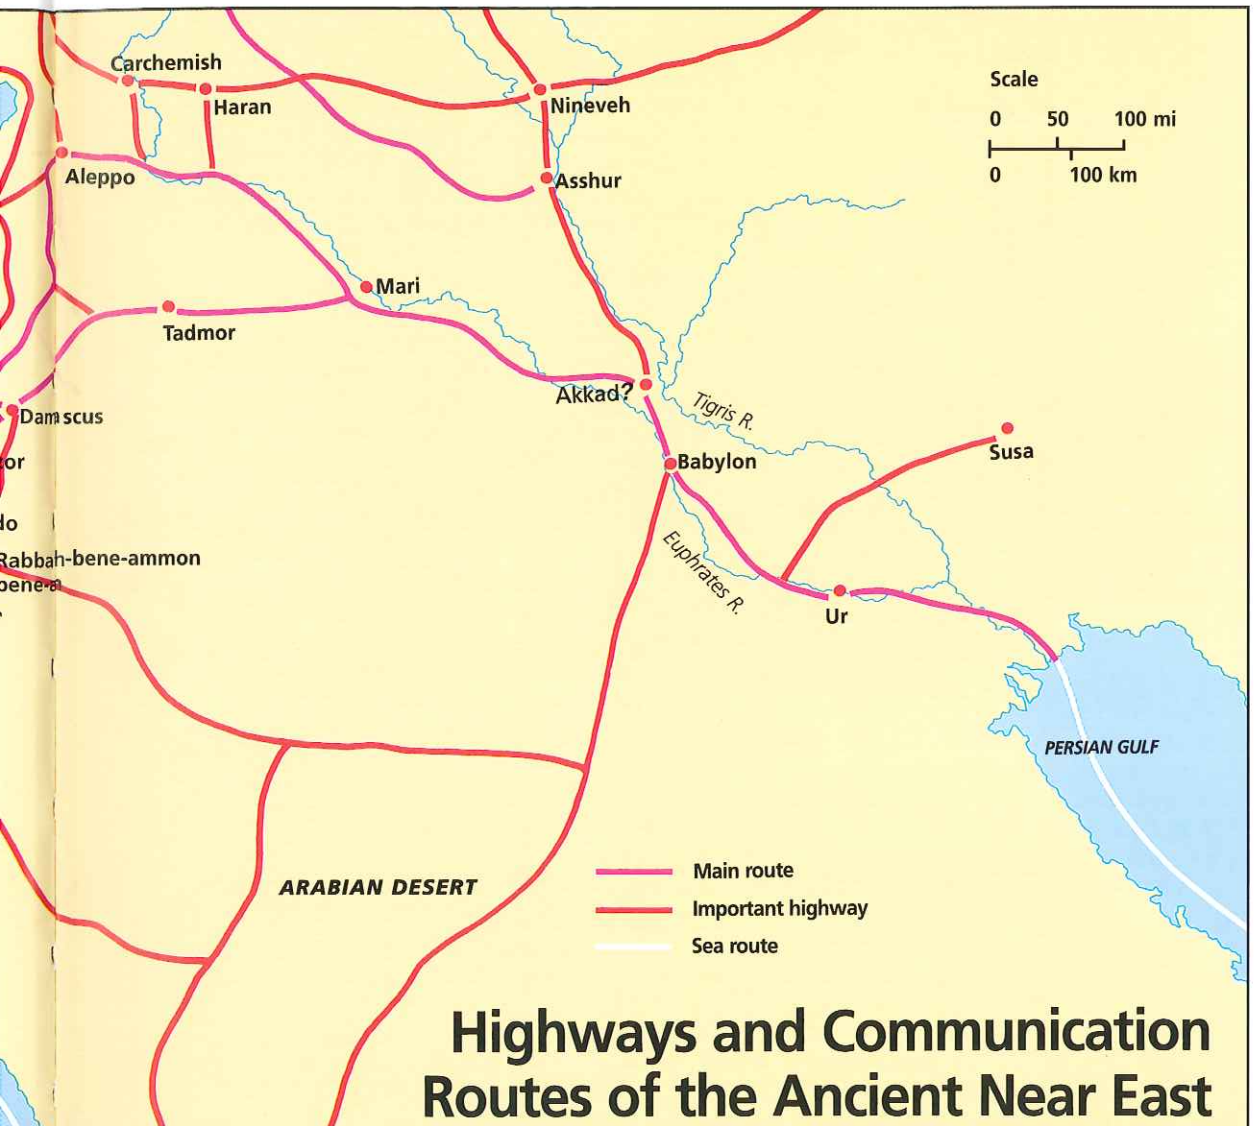

Middle Bronze Age

the end of the Early Bronze Age, the first Semitic empire gained control of all of southern Mesopotamia from a power base at the city of Akkad (2334–2193 B.C.).¹⁵ In Egypt, the Early Bronze Age saw the flowering of the Old Kingdom Period, which was the era of the great pyramids and the apex of Egyptian culture.¹⁶ By the close of the Early Bronze Age, all the main features of human civilization and culture had appeared in both Egypt and Mesopotamia.

Although precise dates for Israel's patriarchs (Abraham, Isaac, and Jacob) are impossible to determine, they may be generally placed in the **Middle Bronze**

Age (2000–1550 B.C.).¹⁷ This period of ancient Near Eastern history is marked by the movement of ethnic groups and new empires replacing the older powers of the Early Bronze Age. In Mesopotamia, after a brief renaissance of Sumerian culture (Ur III dynasty, 2112–2004 B.C.), the country came under the control of a new Semitic element, the Amorites. Early in the Middle Bronze Age, Amorites ruled Mesopotamia from several strong city-states in an uncertain balance of power. But then one individual from the city of Babylon was able to consolidate his strength and establish a new empire throughout Mesopotamia. **HAMMURABI** rose to power in

Archaeological Periods of Ancient Near Eastern History

Approximate Dates (B.C.)	Archaeological Period	Israel	Ancient Near East
Before 14,000	Old Stone Age (Paleolithic)		Pre-cave culture
14,000–8000	Middle Stone Age (Mesolithic)		Cave culture
8000–4200	New Stone Age (Neolithic)		Neolithic Revolution: cultivation of crops & beginning of rain-based agriculture, domestication of animals, first permanent settlements
4200–3300	Copper-Stone Age (Chalcolithic)		Metal replaces stone in the production of tools and weapons
3300–2000	Early Bronze		Invention of writing. Birth of human civilization. Egyptian Old Kingdom. Sumerian & Akkadian kingdoms in Mesopotamia. Old Canaanite culture at Ebla.
2000–1550	Middle Bronze	Israel's Patriarchs	Arrival of Amorites and other ethnic groups in Mesopotamia. Old Babylonian Empire. Egyptian Middle Kingdom.
1550–1200	Late Bronze	Egyptian bondage. Birth of Moses. The exodus. Wilderness wanderings. Israelite conquest of Canaan.	International contacts & balance of power. Powerful Egyptian New Kingdom exerts influence in Syria–Palestine. Rise & fall of the new Hittite Empire. Kassite control in Mesopotamia.
1200–930	Iron Age I	Period of the Judges. United Monarchy: Saul, David, Solomon.	Invasion of sea peoples & disruption of major powers. Rise of new ethnic groups, including Arameans & Israelites. Rise of Assyria.
930–539	Iron Age II	Divided Kingdom. Fall of Israel in 722. Fall of Judah in 587.	Weakened Egypt. Assyria reaches greatest strength before fall in 612. Neo-Babylonian Empire: Nebuchadnezzar.
539–332	Iron Age III	Return of Jewish exiles. Ezra & Nehemiah. Building of second temple & walls of Jerusalem.	Cyrus captures Babylon in 539. Persian Empire.

Herr, "Periodization," in *The Oxford Encyclopedia of Archaeology in the Near East*, 4:267–73; Amihai Mazar, *Archaeology of the Land of the Bible, 10,000–586 B.C.E.*, Anchor Bible Reference Library (New York: Doubleday, 1990), 30.

covenant

Late Bronze Age

New Kingdom

1792 and established the Old Babylonian Empire, which endured until 1595 B.C.¹⁸ Hammurapi is most famous for his collection of laws, many of which bear striking resemblance to the laws of Moses in the Pentateuch.

In Egypt, after a period of darkness and confusion called the First Intermediate Period (2200–2000 B.C.), the country once again flourished during the Middle Kingdom Period (2000–1700 B.C.). The Middle Kingdom was a time of peace and stability, and one in which Egypt engaged in trade with the Levant, resulting in the acquisition of considerable wealth. But toward the end of Middle Bronze, Egypt also succumbed to the rise of Semites, which is characteristic of the Fertile Crescent throughout this period. Native Egyptian control of the country ended when the Hyksos, Semites probably from Syria–Palestine, took control of the Delta in the north. Whether the Hyksos invaded and took control, or whether they had been gradually growing in strength is not known. They ruled Egypt for about 150 years in what is called the Second Intermediate Period (1700–1540 B.C.). For the first time in Egypt's history, the country was conquered and dominated by foreigners.

The Middle Bronze Age world into which Abram stepped was one of peoples on the move. In Syria–Palestine, too, Semitic peoples were settling in. The Canaanites were establishing city-states in the coastal plains and valleys as early as the third millennium. These people may have been of the same Amorite stock as those who had settled Mesopotamia.¹⁹

Abram departed from Ur of the Chaldeans in southern Mesopotamia with his extended family and journeyed to Haran on the Euphrates in northwestern Mesopotamia. His father, Terah, died in Haran and Abram (whose name was changed to Abraham) was called to travel on in faith to unknown lands.²⁰ When Abraham reached Canaan, God established a **covenant** with him and promised to give him a vast number of descendants and the land of Canaan as an inheritance. These promises were uniquely suited for a transitory, migrant Amorite looking for land to settle. After many years, Isaac was miraculously born to Abraham's wife Sarah when she

was ninety years old and Abraham was one hundred years old.

Isaac's wife Rebekah had twin sons, Jacob and Esau. Although Esau was the oldest, Jacob became the child of the patriarchal promises. Jacob, whose name was changed to Israel, had twelve sons. His favorite son, Joseph, was betrayed by his brothers, sold into slavery, and taken to Egypt. While in Egypt, Joseph was blessed by God and miraculously rose to high political office in the foreign land. During a severe drought, the sons of Israel traveled to Egypt in search of food for the family back in Canaan. Much to their surprise, they were confronted by the very brother they had betrayed and now their lives were in his hands. But Joseph provided food for them and saved their lives. Israel and all his children moved from Canaan to Goshen in the northeastern Delta of Egypt.

We can date these events no more precisely than a general time in the Middle Bronze Age (2000–1550 B.C.). The Hyksos rule of Egypt (1700–1550) may well have been the time when the children of Israel lived in Egypt and multiplied so rapidly. But once the Hyksos were expelled, a "new king arose over Egypt, who did not know about Joseph" (Ex 1:8). The "new king" probably refers to the first king of a different dynasty. For the next several hundred years, the Israelites were enslaved by the Egyptians, and forced to build their cities and drive their economy.

Israel's Beginnings: Moses and Joshua

The **Late Bronze Age** (1550–1200 B.C.) was one of international trade and balance of world powers, with Syria–Palestine caught in the middle. The Egyptians successfully ended their subjugation to the Hyksos and entered the period of their greatest political strength, the **New Kingdom** (dynasties 18–20, 1550–1100 B.C.).

Whereas Egypt was dominant throughout this period, Mesopotamia experienced a time of political weakness. After the fall of Hammurapi's Old Babylonian Empire, southern Mesopotamia was controlled by foreigners from the Zagros Mountains, the Kassites. The long rule of the Kassite dynasty (over three hundred years)

lingua franca

Amarna Letters

brought peace and stability to Babylonia, though not military superiority. The Kassites preferred peace treaties and other nonmilitary means of diplomacy to defend their borders. They adopted many elements of traditional Babylonian culture and raised southern Mesopotamia to a new level of international prestige during this period. The Babylonian dialect of Akkadian became the *lingua franca*, or international language of the day.

Egypt's powerful rulers of the New Kingdom attempted to control the coastal areas of Syria–Palestine, the coastal highway to Phoenicia (*Via Maris*), and NUBIA to the south.²¹ By controlling commercial trade with the Aegean and the rest of western Asia, Egypt dominated trade and acquired tremendous wealth and prosperity. At the height of this empire, AMENHOTEP IV of the 18th dynasty became pharaoh around 1353 B.C. Soon thereafter he changed his name to AKHENATEN and moved the capital about two hundred miles north of THEBES to modern EL-AMARNA. For about a decade, Akhenaten elevated Aten, the visible image of the sun, to a place of supremacy and came close to monotheistic worship. Hundreds of clay tablets written in Babylonian (the so-called **Amarna Letters**) have been found at Akhenaten's short-lived capital. These letters from Egyptian vassal-kings in Syria–Palestine and rulers in ANATOLIA and Mesopotamia reflect the politics of the mid-fourteenth century B.C. It appears that Akhenaten was no longer capable of controlling the city-states of Syria–Palestine. Whether through neglect or military weakness, Egypt began to lose its international grip in western Asia.

In Anatolia, the Hittite Empire gained control of western Asia Minor and north Syria. Under strong royal leadership, the Hittites retained control of Syria almost as far south as Damascus from about 1344 B.C. to 1239 B.C.²² Hittite kings fought the pharaohs of Egypt's 19th dynasty for control of Syria–Palestine, eventually coming to a draw in the mid-thirteenth century. Toward the end of the Late Bronze Age, the Hittite king HATTUSHILI III and the Egyptian RAMESSES II agreed to a peace treaty, ending the hostilities between the two nations.

Sometime during the Late Bronze Age, while Israel suffered under the heavy burden of slavery in Egypt, Moses was born to the tribe of Levi. At the time of Moses' birth, the pharaoh was attempting to control the rapidly growing Israelite population by killing newborn Israelite boys. But Moses was miraculously saved by Pharaoh's own daughter and raised in the Egyptian royal court. There he was providentially given the finest Egyptian education (Acts 7:22).

Moses was prepared and called by God to lead the Israelites out of their bondage in Egypt. God used a series of ten plagues to prove *he* was in control of the cosmic order, not the Egyptian god-king, pharaoh. These plagues demonstrated the superiority and majesty of Israel's God, Yahweh. God then used Moses to deliver Israel from Egypt and bring them to the Sinai Peninsula to establish a covenant with them. There he gave them the Law to maintain the new covenant relationship and protect them in the promised land they were to inherit.

The new nation, Israel, rejected God's leadership in the wilderness and refused to enter the promised land. God punished them by requiring them to wander forty years in the wilderness. During this time the rebellious generation died. Moses also died in the plains of Moab without having the privilege of entering the land promised to the patriarchs. Joshua, Moses' successor, led the nation Israel in conquest of the promised land, fulfilling the promises to the patriarchs.

Though it is impossible to give these events a precise date, it is clear that the Israelite exodus occurred sometime during the New Kingdom Period of Egyptian history. Scholars have proposed two possible dates for the exodus event, approximately 1446 or 1275 (see chapter 6). The question is whether the pharaoh of the exodus was THUTMOSE III (perhaps Amenhotep II) of the 18th dynasty or Rameses II of the 19th dynasty. Regardless of the inability of modern scholarship to date these historical events precisely, the exodus narratives in the Bible reflect genuine Late Bronze Age customs and their factuality is virtually certain.²³

Israel's Statehood: David and His Dynasty

Around 1200 B.C., cataclysmic changes began to occur in the ancient Near East. The major powers (notably the Egyptians and the Hittites) suddenly declined and the political map changed dramatically. Most scholars assume the changes started with the fall of Troy (around 1250) and the subsequent fall of the Mycenaean cities on the mainland of Greece. Survivors

must have fled by sea along the coasts of the Mediterranean, disrupting all the major powers of the ancient world. These newcomers are known collectively as "**sea peoples.**" One group of these sea peoples, known from Egyptian sources as "Peleset," settled on the southwest coastal plains of Syria-Palestine. They are known in the Old Testament as "Philistines," a term that also gave us the word "Palestine."²⁴

Of the many changes brought about by

the arrival of the sea peoples in the ancient Near East, two are of special significance here. First, within a century of their arrival, the political order that had existed for over three hundred years dissolved, leaving a power vacuum. Rather than military campaigns involving international powers such as the Egyptians and Hittites, local skirmishes and regionalized conflicts ensued. New ethnic groups filled the power vacuum and eventually developed smaller empires of their own, notably the Arameans of Damascus and the Israelites in the highlands of Palestine.

The second result of the arrival of the sea peoples was the spread of new metalworking technology, particularly the use of iron for making weapons. Though it is not certain which group actually invented iron technology and first exploited it for weaponry, it is clear that the Philistines had the early advantage in battles with the Israelites due to a superiority in metalworking technology and monopoly of the use of iron (1 Sm 13:19–22). Gradually, iron technology replaced bronze, and archaeologists refer to the period after 1200 B.C. as the Iron Age.

So the period known as Iron Age I (about 1200–930 B.C.) began with the invasion of the sea peoples and the shifting of political power throughout the ancient Near East. Sometime toward the

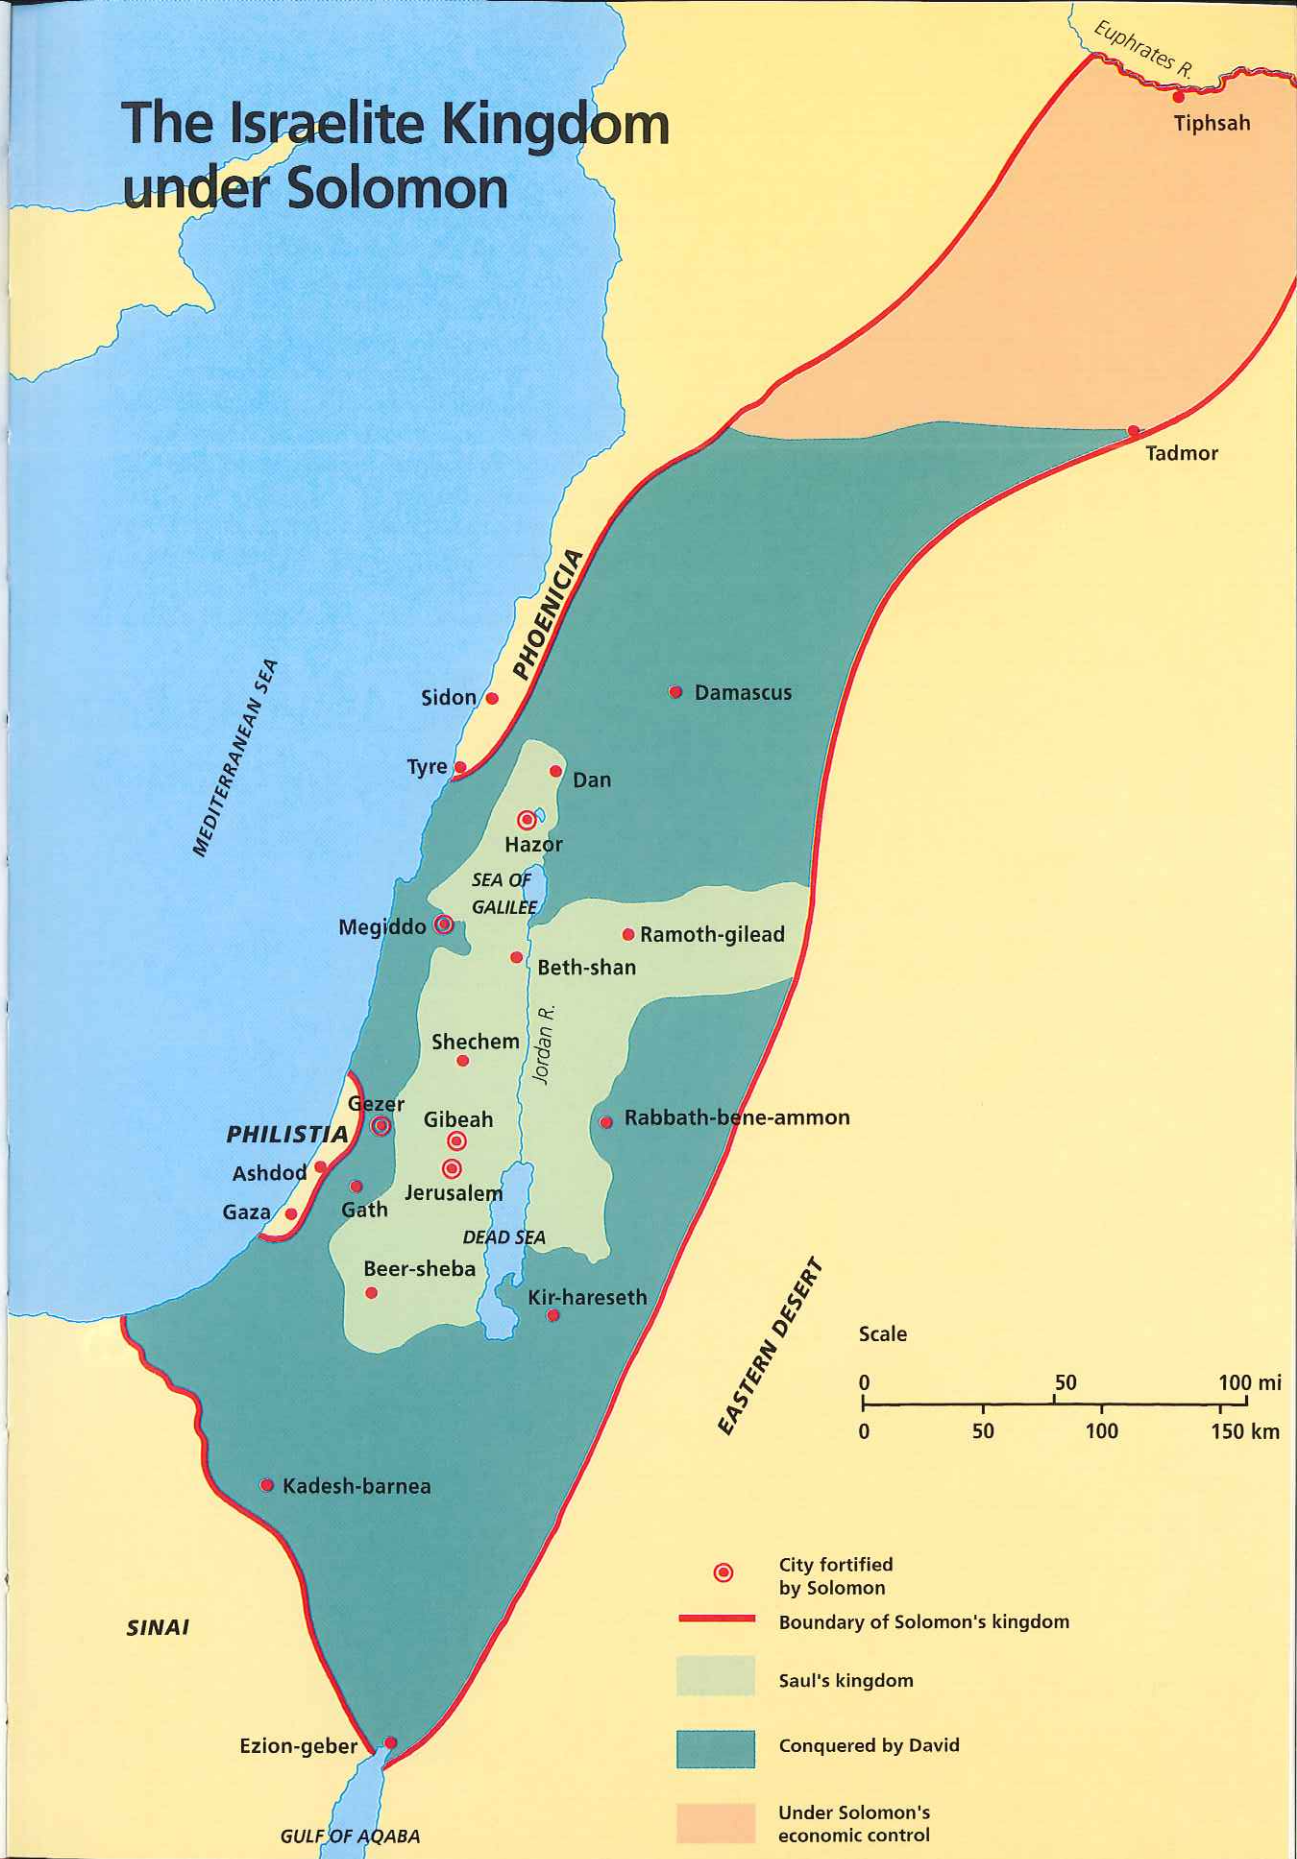

end of the Late Bronze Age, Joshua and the children of Israel had taken Canaan and settled in the central highlands. For at least a couple centuries after the Israelite conquest, Israel governed itself as a loose confederation of twelve tribes, one for each of the sons of Jacob. During this time, leadership rose from the ranks of the common people on a temporary ad hoc basis. These “judges” were divinely gifted and ordained to consolidate the strength and resources of the tribes in times of national or regional crisis. Military threats arose from surrounding neighbors, particularly the Philistines to the southwest. Though a central governing body was not a necessity, the Israelites grew weary of constant military threats from surrounding enemies. They began to long for a permanent king and royal court to maintain a standing army and secure peace for the future.

The Israelite monarchy developed because of this constant threat of military invasion coupled with cultural pressure to become like other nations: “We want a king over us. Then we will be like all the other nations, with a king to lead us and to go out before us and fight our battles” (1 Sm 8:19b–20). Samuel was a prophet and judge who led Israel in the time of transition from judges to kings. With God’s blessing, Samuel anointed Saul as

Solomon’s North Palace, Megiddo. Solomon expanded Israel’s borders and ruled during the only period of Israel’s history that may be called an empire.

the first king of Israel. But Saul failed to maintain his relationship with God and was eventually rejected as king of Israel. Saul's life illustrates the importance of guarding our relationship with God as the most important task we have to do. After Saul's failure, God instructed Samuel to anoint a man after God's own heart (1 Sm 13:14), the young David, as the next king of Israel.

Under David's strong leadership, Israel finally defeated the Philistines and forged a degree of peace and security in Syria-Palestine. David's reign ushered in a period of stability that would become Israel's golden age. He unified the tribes and provided economic and political freedom. Though there continued to be much internal strife during his reign, he was able to leave a unified kingdom to his son, Solomon. This was the beginning of dynastic succession in ancient Israel.

Solomon expanded Israel's borders to the Euphrates in the north and to Egypt in the south. He ruled during the only period of Israel's history that may be called an empire. He brought great wealth and prosperity to the nation through international trade. God gave Solomon wisdom in all matters, including the ability to govern the people. The royal court grew and became more involved in the affairs of the state. Solomon's fame as an inspiring leader spread around the world, and international contact became commonplace. Solomon also had the privilege of building God's temple in Jerusalem. The reigns of David and Solomon, or the "united monarchy," would always be remembered as the ideal time of peace and prosperity (1 Kgs 4:25).

The success of the united monarchy was short-lived. Solomon, like Saul before him, allowed his heart to turn away from God: "his heart was not fully devoted to the LORD his God, as the heart of David his father had been" (1 Kgs 11:4). Shortly after the death of Solomon, the kingdom split into two weaker nations, Israel in the north and Judah in the south; this became the so-called divided monarchy.

Northern Israel fell quickly into religious apostasy. The first king of the north, Jeroboam I, attempted to use religion for political purposes and compromised the practices of ancient Yahwism inherited

from Moses. But a later king of the north went even further. Omri and his son Ahab intentionally combined **Mosaic Yahwism** with **Canaanite Baalism** in an attempt to gain greater political control. The northern kingdom was also plagued by political instability. Over the two hundred years of its history (931-722 B.C.), Israel had nineteen kings in nine separate dynasties. In 722 B.C., the capital of northern Israel, Samaria, fell to the Assyrians.

By contrast, Judah, the southern kingdom, continued to have one royal family, the Davidic dynasty, for nearly 350 years (931-587 B.C.). Although Judah maintained political stability, she also fell into religious apostasy, though much more gradually

than her neighbor to the north. Many of the kings of Judah were faithful to the Lord, especially early in the kingdom's history. The final century of Judah's history is marked by an interchange of good kings and bad kings. Sadly, Judah's capital, Jerusalem, fell to the Babylonians in 587 B.C.²⁵

Archaeologists use the term Iron Age II for the period 930–539 B.C., which covers Israel's divided kingdoms: northern Israel and southern Judah. Elsewhere in the ancient Near East at this time, Egypt was trying to reassert itself as a major world power. But except for a brief moment at the turn of the sixth century B.C. (26th dynasty), Egypt was never again a major player in the ancient world. The real story

of Iron II is the rise and fall of new empires in Mesopotamia.

Along the banks of the Tigris River in northern Mesopotamia, a new force emerged in the Iron Age that would dominate ancient Near Eastern history for two centuries. Assyrian imperialism emerged in the mid-ninth century and began to impact the politics of Syria–Palestine. Yet Assyria went through a period of internal weakness in the first half of the eighth century. This allowed for the long and prosperous reigns of Jeroboam II in Israel (793–753 B.C.) and Uzziah in Judah (792–740 B.C.). But success is not necessarily a sign of God's approval. While both kingdoms prospered during this half

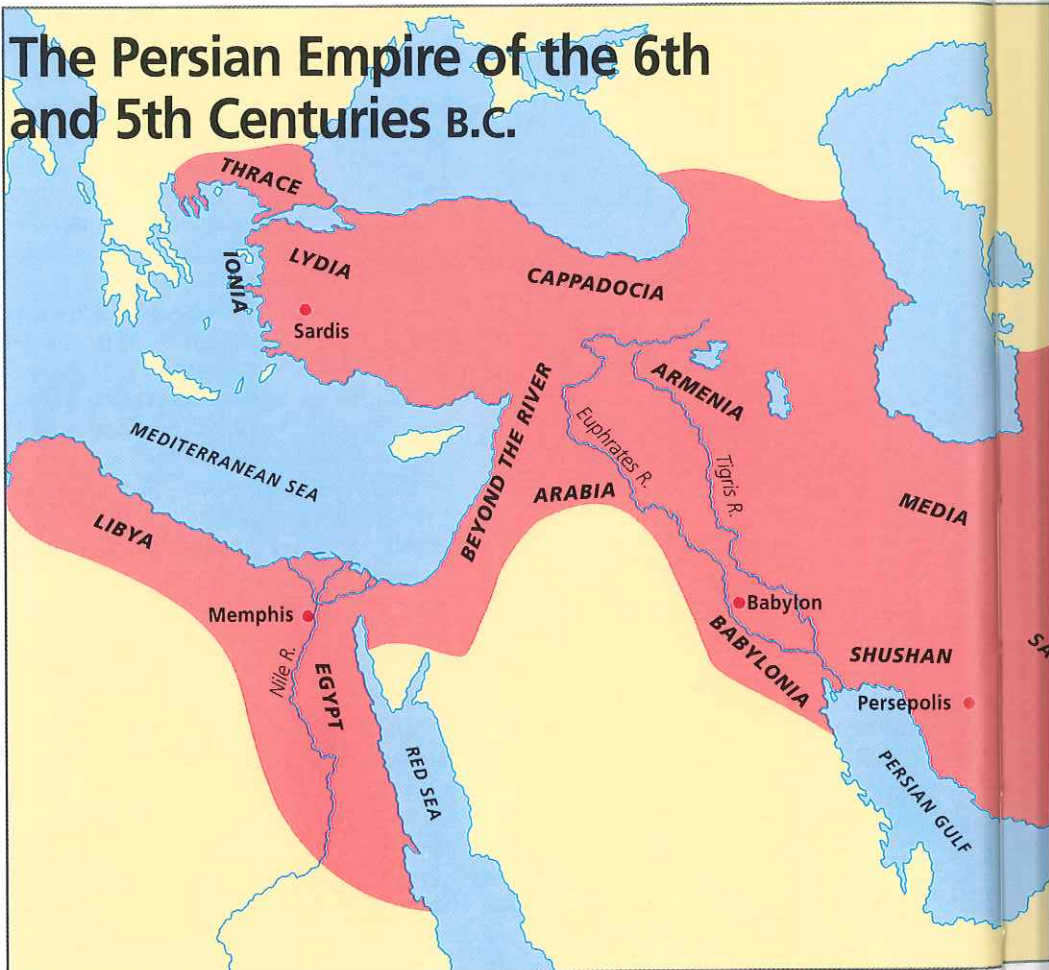

century, social injustice and moral decay began to consume the soul of Israel and Judah. This was the backdrop for the first of the classical prophets: Amos, Hosea, Isaiah, and Micah. God raised up his servants to warn the nations of impending doom and to call them to repentance.

Assyria's weakness was but a temporary lull in her rapacious drive for more power; the early eighth century was only the calm before the storm. When TIGLATH-PILESER III brought Assyria back to full strength in 745 B.C., the nation was stronger than before and ready to be used as God's instrument of destruction against the rebellious northern Israel. Over the next two decades, Israel vacillated between paying tribute to the Assyrians and rebelling against them. Finally, Tiglath-Pileser's son SHALMANESER V laid siege to Israel's

capital Samaria in 725 B.C. Three years later, the northern nation fell (722 B.C.) and became a province in the enormous Assyrian Empire.

During the next century, Judah also attempted various ways of dealing with the Assyrian threat. For example, Hezekiah of Judah was anti-Assyrian, but his son Manasse adopted a pro-Assyrian policy. During the seventh century, Assyria reached the pinnacle of its imperial power and became the first truly world empire, as well as the first in a line of such empires from a Mesopotamian base (Assyria, Babylonia, and Persia) before the power shifted to the west (Greece and Rome). Under the kings of the early seventh century (SENNACHERIB, ESARHADDON, and ASHURBANIPAL), the Assyrians were able to defeat their traditional enemies to the north, the Urartians. They

even captured faraway Egypt in 663. But throughout this period of international domination, Assyria had a persistent and ever-present problem closer to home. The Chaldeans of southern Babylonia were growing ever more rebellious and difficult to contain. They soon became independent and eventually replaced the Assyrians.

Under the able rulership of NABOPO-LASSAR and his famous son NEBUCHAD-NEZZAR II, Babylonia participated in Assyria's defeat and became the next great world empire. During the 43-year rule of Nebuchadnezzar (605-562 B.C.), Babylonia reached the apex of its wealth and political power in what is called the Neo-Babylonian Period. Judah's response to Babylonia's imperial aspirations alternated between two tactical strategies. Some favored rebellion, supported by a pathetic trust in a weakened Egypt ("that splintered reed," Is 36:6). Others, such as Jeremiah, urged Judah's submission to Babylon as a vassal state. In 597 Nebuchadnezzar attempted to end Judah's rebellious streak by capturing Jerusalem and taking King Jehoiachin into exile in Babylonia, along with many of the people of Jerusalem, including the prophet Ezekiel. Another rebellion under Zedekiah resulted in the total destruction of Jerusalem in 587.

The Babylonians not only destroyed the city and deported much of the population, but they also tore down the temple and effectively ended the Davidic dynasty. The Davidic line would barely survive through Jehoiachin during the exile. The loss of temple and kingship was a dominant and formative event in Old Testament history. It forced a rethinking of old theological assumptions and made it necessary to reformulate Israel's earlier religious convictions, especially the nature of God's covenant. All of this formed the backdrop for some of Israel's most significant prophetic figures: Jeremiah, Habakkuk, and Ezekiel.

Israel's Exile and Restoration: Ezra and Nehemiah

The final archaeological age of the Old Testament period is the Persian Age (539–332 B.C.), otherwise known as Iron Age III. The reign of the Persian king CYRUS marks the beginning of the Persian Empire. This kingdom was one of the largest in the ancient world, stretching from the isles of the Aegean Sea and the Nile across the ancient Near East to the Indus Valley.²⁶ The Persian Empire controlled the ancient world for two centuries. ALEXANDER THE GREAT conquered the Persians around 330 B.C. and ended the string of world empires from a Mesopotamian base.

Summary

1. Israel was part of the ancient Near East that is now called the Middle East.
2. The three geographical regions of the ancient Near East—Mesopotamia, Egypt, and Syria–Palestine—were joined by an arch of rich soil called the Fertile Crescent.
3. The four subregions of Israel are the coastal plains, the ridge or central mountain range, the Jordan Rift, and the Transjordanian highlands.
4. Two of the important highways of the ancient Near East passed through Syria–Palestine: the *Via Maris*, or way of the sea, and the king's highway.
5. The history of the Old Testament spans a time period of about two millennia as opposed to the New Testament, which covers a century.
6. The invention of writing—cuneiform in Mesopotamia and hieroglyphics in Egypt—began during the Early Bronze Age.
7. The sea peoples probably fled from Mycenaean cities in Greece about 1250 B.C. to the ancient Near East. This brought political changes and new metalworking technology.
8. The constant threat of military invasion from neighbors caused the Israelites to want a king.
9. The period of David's reign was a very stable time in the history of Israel.
10. Under Solomon's reign, the borders of Israel expanded northward to the Euphrates and southward to Egypt.
11. Jewish exiles returned from Babylon in three separate groups led by Zerubbabel, Ezra, and Nehemiah.

Study Questions

- How is the Old Testament "incarnational"?
- Why was the location of Israel strategic in ancient times?
- Locate on a map the geographical regions of the ancient Near East and discuss their major characteristics.
- Locate on a map the four subregions of Israel and discuss their major characteristics.
- Discuss the international social and political climate during the patriarchal age of Israel's history.
- Discuss the international social and political climate during the times of Moses and Joshua.
- What was the political climate of the ancient Near East around 1200 B.C.? What effect did this have on the Israelites?
- What political changes did Iron Age II bring to the ancient Near East? What ramifications did this have for Israel?

Cyrus established a new policy with regard to subjugated peoples and their deities. Unlike the Assyrians and Babylonians, Cyrus desired to placate as many gods as possible. He felt he could better maintain and govern his vast empire with a policy of tolerance and benevolence, rather than cruelty and brutality. The Jewish exile officially ended when Cyrus decreed that captive peoples in Babylonia were free to return to their homelands and establish a degree of self-rule. The Old Testament interprets this historical event as the fulfillment of the prophecy of Jeremiah (2 Chr 36:22–23; Ezr 1:1–4).

Over the next century, three separate groups of Jewish exiles returned to Jerusalem to rebuild and start over.²⁷ The first group came under the political leadership of Zerubbabel and the religious leadership of the high priest Jeshua (Ezr 1–6). The returnees tried to rebuild the temple,

but had to battle opposition, discouragement, and lack of resources. It was only after the ministries of the prophets Haggai and Zechariah that the second temple was finally finished in 516 B.C.

Ezra the priest and scribe led the second expedition from Babylonia in 458 B.C. (Ezr 7–10). Ezra's task was not to rebuild the country materially as the first returnees had done. He was concerned with the social and spiritual well-being of the people.

Nehemiah led the third return to Jerusalem in 445 B.C. (Neh 1–13). Nehemiah was a Jewish exile who had risen to high office in the Persian royal court. He saw his task primarily as one of rebuilding Jerusalem's city walls and providing better defense for its inhabitants. After completion of the wall, Nehemiah stayed in Jerusalem as governor of the Persian province.

The Old Testament ends with God's people restored to the land and a new temple rebuilt for proper worship of God. Yet this was clearly not a "kingdom of God," with a son of David on the throne of an empire with worldwide significance.

The promises of God's sacred covenant with his people would have to wait for another time and place. The Old Testament ends in expectation and faith. God would yet fulfill his purposes in his own timing and in his own way.
